

SERIS - MARITIME

Fully integrated, automated container-handling system, for greater port efficiency and productivity

Implemented in one of the principal seaports in South Asia, the SERIS - Maritime Container Terminal Management sub-system offers a fully integrated container-handling solution to enhance port operations.

IMPROVED PORT OPERATIONS THROUGH AUTOMATED SYSTEMS

Handling 92% of the country's import-export trade, the port plays a vital role to the national economy. To stay competitive, a customised container-handling system was developed to digitise and automate operations, and allow the port to be more responsive to render necessary

facilities and services for proper and efficient cargo-handling.

ENHANCED PRODUCTIVITY & SERVICE LEVELS

The deployed solution has not only enabled the port to double its handling capacity, but also reduced the turnaround time of ships significantly.

The SERIS - Maritime Container Terminal Management system is a proven, effective solution well-equipped to provide world-class services for cargo and ship handling, while allowing the user to remain competitive with other global ports.

SOLUTION FEATURES

- Customisable and modular container-handling system
- Berth Management and Meteorological Information add-on modules
