

SERIS - SMART CITY

Creates safer, more secure communities for citizens to live, work and play

An essential city management system designed for urban planners and governments, SERIS - Smart City enhances city operations through greater citizenry engagement to improve citizens' lives and provide safer, more secure communities.

FEEL

Built upon an Intelligent Sensor Grid, SERIS - Smart City allows the public to report community issues with greater ease, and municipal agencies and responders to resolve them more quickly and effectively.

CONNECT

SERIS - Smart City encompasses a common infrastructure and technical architecture to support a smart and connected ecosystem. By integrating

our technology in City Command Centres, the system interface offers richer user experience with Mobile Operations Applications, Intelligent Routing and Resource Management. It improves inter-agency collaboration for swifter, more effective decision-making by government agencies and authorities.

THINK

Coupled with Big Data technologies, the solution transforms large and complex data sets into useful insights.

Using Business Intelligence/Business Analytics and predictive algorithms on the collected static and real-time data, the system identifies patterns, trends and optimisation for enhanced city management.

SOLUTION FEATURES

- Improves responsiveness and efficiencies of city resources
- Enhance city management and interaction, for closer communities

SHARE

SERIS - Smart City provides the community with access to open municipal data and allows citizens to easily retrieve real-time information on traffic, weather and incidents through public broadcasts, media, the Web, and mobile applications.
