

SERIS - Public Safety

Empower police to capture, manage and integrate crime and criminal records in a country to reduce crime and make communities safer

Designed and implemented in Southern Africa, the Crime and Criminal Records System (CCRS) offers a proven and real-time solution to share crime and criminal records instantaneously across police stations, various police divisions, departments and law enforcement units.

EFFICIENT COUNTRY WIDE ONLINE CAPTURING SYSTEM

With the lack of information sharing between the same agency, different government agencies and issues in proper documentation of incidents and crimes, a comprehensive and reliable end to end solution has been developed to assist law enforcement agencies to effectively manage and reduce crime rates.

By offering a country wide online capturing and sharing system of reported crime and criminals, CCRS allows better facilitation in

crime management, reporting and crime intelligence. With these functionalities, the deployment of resources and case investigation can be improved.

IDENTIFY CURRENT AND POTENTIAL CRIMES HOTSPOTS IN REAL-TIME

Crime happens randomly and will not spread evenly across maps. CCRS provides Geographical Information System (GIS) spatial analysis for law enforcement agencies to visualize current and potential crime hotspots and patterns.

With the consolidated data from government network platform, a built-in operations dashboard allows the examination of complex seemingly unrelated criteria. These data can be displayed in graphical layers, spatial maps or internal (AFIS) and external interfaces (Interpol, Immigration etc) for better visuals

and understanding. Law enforcement agencies can be directed to pay attention to places of high crimes and allocate their resources accordingly as and when needed.

With CCRS, the collected crime and criminal information, crime analysis, trends and patterns will be able to improve policing operations leading to an improved response to fight crimes.

SOLUTION FEATURES

- Real-time command and control dashboards
- Quick access to crime suspects, criminals, missing persons, wanted list, fake and stolen IDs and driving licenses
- Facilitate police clearance with Automated Fingerprint Identification System (AFIS) Interface
