

# SERIS - Maritime

Information Network System to support regional cooperation in the fight against piracy and sea robbery

Imagine the need to constantly find ways to improve the communications between members around in the world in times of maritime incident like sea robbery, piracy etc. With our Information Network (IFN) System, it creates a common platform for different focal points to communicate and exchange information with ease.

## ENHANCED REGIONAL COOPERATION AGAINST INCIDENTS AT SEA

With the IFN System, there is real time information update about any incidents in the sea. When there a piracy or sea robbery happens, the victim reports to the nearest focal point which will respond to this incident and file a report about it through the IFN System. Different focal points can communicate

through the Information Sharing Centre (ISC) 24 hours leading to a faster mean of disseminating alerts for immediate assistance of other member countries like tracking of hijacked vessels.

## POWERFUL ANALYTICAL AND REPORTING TOOLS

Being able to easily identify patterns and trends about incidents like pirate behaviors helps to enhance the ability to capture them. With the IFN System, users are provided with powerful analytical and reporting tools to aid them.

With these insights, countries are able to improve enforcement and preventive measures to curb with these problems. The shipping community can also avoid and deter the attacks. These can create more operation efficiency.

## SOLUTION FEATURES

- 24/7 Information Management
- Secured access for authorized users with user id and passwords
- Generates graphical and textual reports for analysis

With the IFN System, sharing of piracy and arm robbery information can help improve the operational efficiency when responding to maritime incidents as well as the development of preventive measures.
