

As the world becomes increasingly virtualised, application centric, cloud-based, and mobile, it also lead to a rise in Cyber Threats. This can range from Cyber-attacks to unknown new generation’s threats, making anyone and everyone a target.

Developed by ST Electronics, CyberPrism SIEM solution helps connected organization gain actionable insights into the cyber threats on the horizon for enhanced business resiliency and agility.

HOW CAN SERIS– SMART ANALYTICS (CYBERPRISM) HELP GOVERNMENTS AND ENTERPRISES?

1. Organisation can accurately collect, analyse, identify and monitor security threats in their analytics modules **to effectively plan, prevent and respond to threats and incidents**
2. Provides a unified data management and presentation platform with integrated logs from various SIEM, servers, network devices etc **to perform cross log correlation**
3. Equip Security Operations Centre (SOCs) with enhanced cyber analytics capabilities through **event correlation and contextualization over time and space**
